Myelodysplasie

Thrombopénie: 43000

Leucopénie

Merci de noter que Nellix ne sera disponible que pour un usage dans le cadre d'un protocole clinique qui respecte les indications actuelles.

De ce fait, nous aurions besoin, au plus tôt possible, du Scan CT pour qu'un conseil de médecins puisse l'examiner et déterminer si Nellix est bien l'option endovasculaire convenable au précédent Nellix échoué.

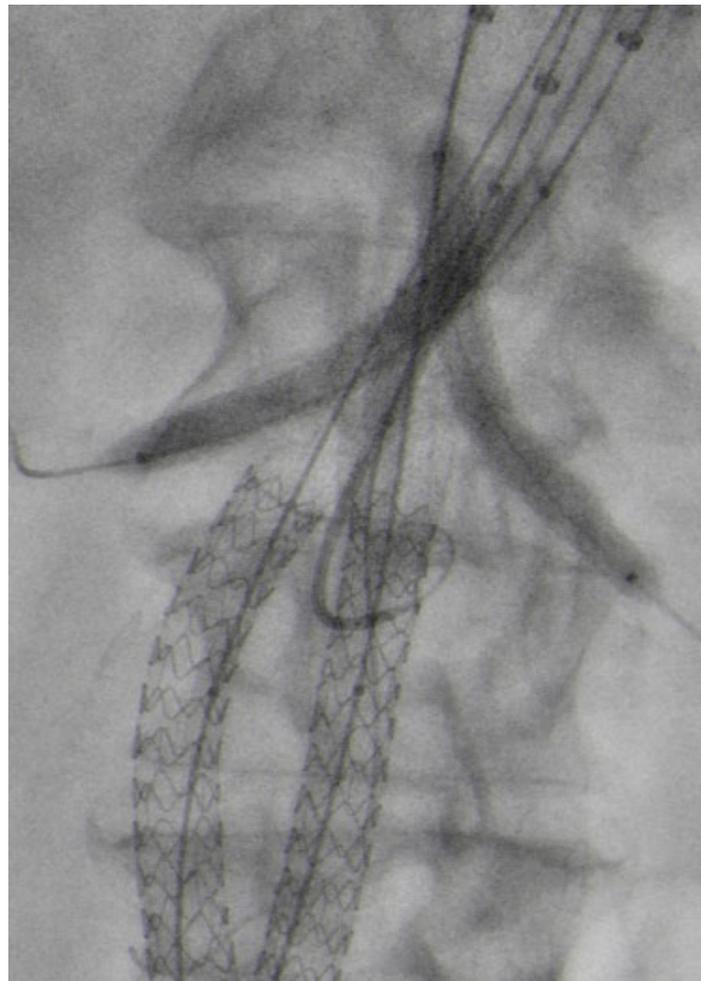

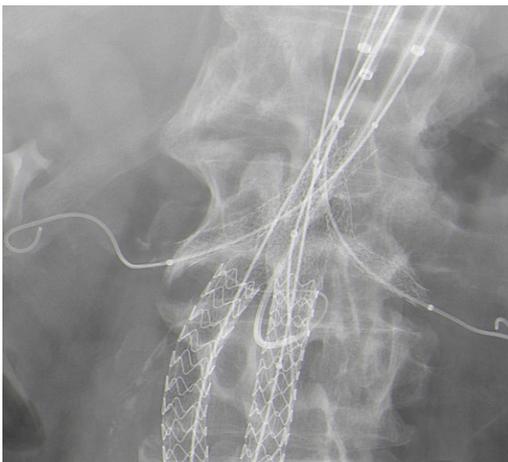

Si le cas est jugé approprié, nous allons procéder à l'usage compassionnel, Mr T. va confirmer et effectuer une recherche concernant le processus spécifique pour Monaco.

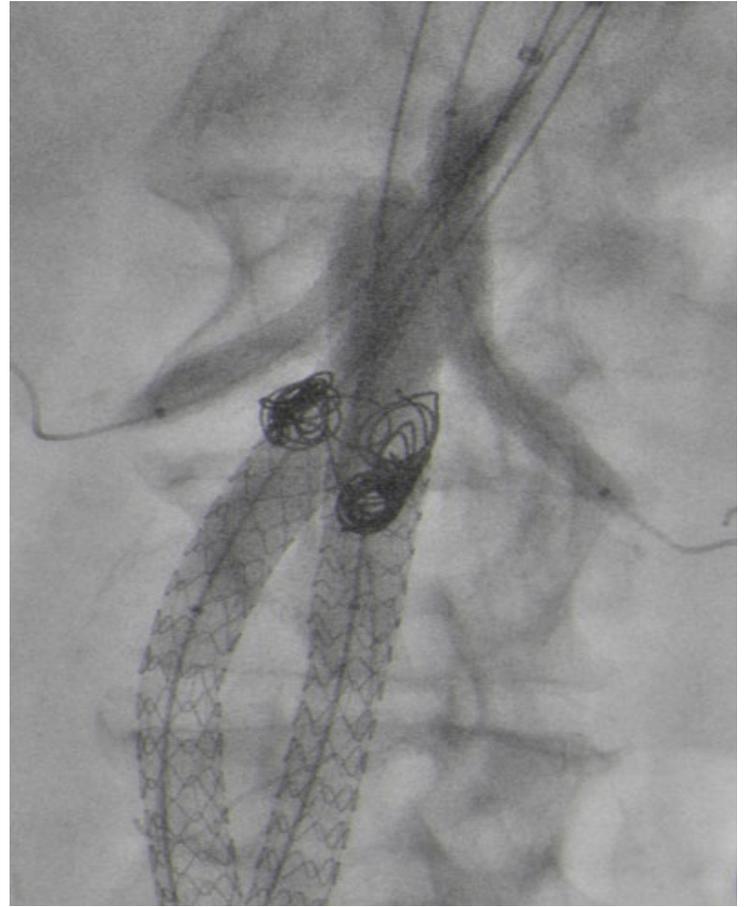

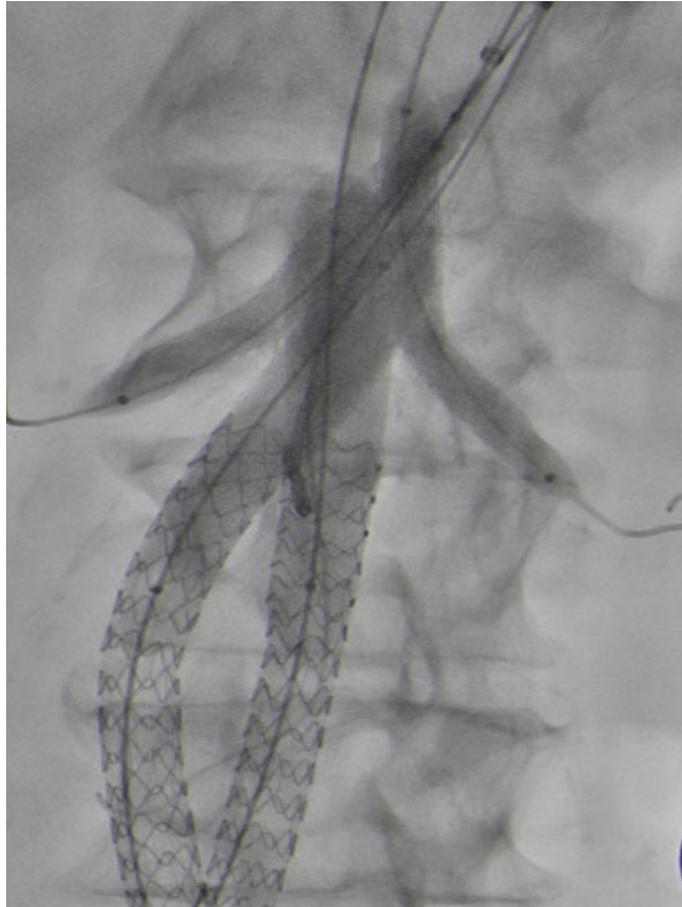

Pour l'utilisation compassionnelle, nous aurions besoin de recueillir les éléments suivants:

- o Tarification de l'implant*
- o Lettre du médecin demandant Nellix pour un patient ayant déjà une Nellix échouée.*
- o Formulaire d'accusé de réception du médecin hors IFU (v) daté et signé*
